ABSTRACT

Access Control Lists (ACLs) are an important security mechanism in ServiceNow used to control who can access, create, modify, or delete records. This project focuses on implementing a **script-controlled ACL mechanism to restrict record access based on a field value**. The project is developed using the ServiceNow Developer Instance. A student/institution details table is created with fields such as Student Roll Number, Student Name, Faculty Name, Branch, Phone Number, and Description. Different custom roles are created to provide different levels of access to the records. The main objective is to ensure that users do not receive unrestricted access to all records. For example, the Read ACL is configured with the `bb1` role and a condition that restricts access to records where the **Branch is EEE**. A scripted ACL is also used to control access based on the user's role. Separate ACLs are created for Write, Create, and Delete operations using the `bb2` and `bb4` roles. This project demonstrates how ServiceNow ACLs, roles, conditions, and scripts can be combined to implement **role-based and field-based record security**.

1.Introduction

Access control is an important part of application security. In an application, different users may require different levels of access.

For example:

- Administrators may have full access.
- Managers may have limited access.
- Normal users may have read-only access.

The proposed system uses **ACLs and roles** to implement these permissions. The system allows administrators to create roles, assign permissions, configure ACL rules, and remove unnecessary roles when required.

1.1. Objectives:

The main objectives of the project are:

- To provide secure access to application resources.
- To create and manage user roles.
- To create and configure Access Control Lists.
- To control read access to resources.
- To assign appropriate permissions to users.
- To prevent unauthorized access.
- To remove unnecessary roles when required

2. Architecture:

3. System Requirements

3.1. Software Requirements:

- **Operating System:** Windows / Linux
- **Platform:** ServiceNow
- **Web Browser:** Google Chrome / Microsoft Edge
- **Internet Connection:** Required
- **Database:** ServiceNow database
- **Development Environment:** ServiceNow Application Navigator and ACL configuration

3.2. Hardware Requirements:

- **Processor:** Intel Core i3 or above
- **RAM:** Minimum 4 GB
- **Storage:** Minimum 10 GB free space
- **Input:** Keyboard and Mouse
- **Display:** Standard monitor
- **Internet:** Stable internet connection.

4. Implementation:

The project is implemented using the role and ACL management features of ServiceNow.

Milestone-1 Creation of Users and Roles:

User Creation:

1. **Log in** to the ServiceNow instance with **admin access**.
2. **Create a test user:**
 - Navigate to **User Administration** → **Users**
 - Click **New**
 - **User ID:** EEE User
 - **First name:** EEE
 - **Last name:** User
 - **Email:** eeeuser@gmail.com
 - Save the record

The screenshot displays the ServiceNow 'User Administration' page for creating a new user. The browser address bar shows the URL: https://dev413189.service-now.com/now/nav/ui/classic/params/target/sys_user.do%3Fsys_id%3D62b963d4c3e7c310944b9c377d01319a%26sysparm_recor.... The page title is 'User - EEE User'. The form includes the following fields and options:

- User ID:** EEE User
- First name:** EEE
- Last name:** User
- Title:** (empty)
- Department:** (empty)
- Email:** eeeuser@gmail.com
- Language:** -- None --
- Calendar integration:** Outlook
- Time zone:** System (America/Los_Angeles)
- Date format:** System (2026-08-19)
- Business phone:** (empty)
- Mobile phone:** (empty)
- Photo:** Click to add...
- Password needs reset:** ☐
- Locked out:** ☐
- Active:** ☒
- Identity type:** Human
- Internal Integration User:** ☐

At the bottom of the form, there are buttons for 'Update', 'Set Password', and 'Delete'. Below these buttons, there are links for 'Related Links' including 'w Linked accounts' and 'w Subscriptions'. The Windows taskbar at the bottom shows the date and time as 25°C, Mostly cloudy, and the system language as ENG IN.

Role Creation:

- Navigate to **User Administration** → **Roles**
- Click **New**
- **Name:** Enter role name as bb1
- **Description:** Brief role purpose

- Click **Submit**
- Create other roles also like **bb2,bb3,bb4.(follow the same procedure)**
- Assign all the roles to the **EEE User**

Milestone-2: Tables Creation:

Tables Creation:

1. In the **Application Navigator**, search for **System Definition → Tables**.
2. Click **New** and create a custom table with the following details:
 - **Label:** Institution Details
 - **Name:** u_institution_details
 - **Extends for :** false
3. .Click **Submit**.
4. Add the following fields to the **u_institution_details** table:
 - **Student Roll Number**– Auto Number
 - **Student Name** – Reference- User
 - **Faculty Name** – Reference- User
 - **Branch** – Choice (ECE, EEE, CSE)
 - **Email**– String
 - **Phone Number**– String

- **Description**– Multi String

5. Save the table

6. Create multiple records in the **Student Records** table with different branch values (ECE, EEE, CSE).

ServiceNow recommends creating custom tables in scoped applications. To learn more about creating scoped applications, click [here](#).

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)

Milestone-3: Creation of Access Control List-READ

Creation of Access Control

1. **Click New to create a new ACL (Write).**
2. Elevate “Security_admin” role
3. . In the **Application Navigator**, search for **System Security → Access Control**
4. Enter the following details:
 - **Type:** record
 - **Operation:** read
 - **Name:** u_institution_details
 - **Active:** true
 - **Advanced:** true
5. In the **Requires role** related list, add:
 - bb1 (custom role)
6. Add Data condition as **Branch is EEE**
7. In the **Script** field, add the following script:

Lists(Read ACL):

```
(function () {  
  
    // Allow admin users full access  
    If (gs.hasRole('admin')) {  
        return true;  
    }  
    // Allow only EEE branch users to see EEE records  
    if (gs.hasRole('bb1')){  
        return true;  
    }  
    // Deny access for all others  
    return false;  
})();
```

8. Click **Submit** to save the ACL.

Milestone-4: Creation of Access Control List-CREATE:

Creation of Access Control Lists(Create ACL)

1. **Click New to create a new ACL (Create)**
2. Enter the following details:
 - **Type:** record
 - **Operation:** create
 - **Name:** u_institution_details
 - **Active:** true
3. In the **Requires role** related list, add:
 - bb2 (custom role)
4. No need to add any Data condition
5. Save the ACL Record

Milestone-5: Creation of Access Control List-WRITE:

Creation of Access Control Lists(Create ACL):

1. **Click New to create a new ACL(Create)**
2. Enter the following details:
 - **Type:** record

- **Operation:** create
 - **Name:** u_institution_details
 - **Active:** true
3. In the **Requires role** related list, add:
 - bb2 (custom role)
 4. No need to add any Data condition
 5. Save the ACL Record

Milestone-6: Creation of Access Control List-DELETE:

Creation of Access Control Lists(Delete ACL)

1. **Click New to create a new ACL(Delete)**
2. Enter the following details:
 - **Type:** record
 - **Operation:** Delete
 - **Name:** u_institution_details
 - **Active:** true
3. In the **Requires role** related list, add:
 - bb4 (custom role)
4. No need to add any Data condition

Save the ACL Record

The screenshot shows the ServiceNow 'Access Controls' page. The breadcrumb trail is 'All > Name >= u_institution_details'. The table lists various ACLs with columns: Name, Decision Type, Operation, Type, Active, Updated by, and Updated. The first row is highlighted.

Name	Decision Type	Operation	Type	Active	Updated by	Updated
u_institution_details	Allow If	write	record	true	admin	2026-09-22 01:03:35
u_institution_details	Allow If	create	record	true	admin	2026-09-22 00:58:59
u_institution_details	Allow If	read	record	true	admin	2026-09-21 17:54:52
u_institution_details	Allow If	create	record	true	admin	2026-09-21 17:54:52
u_institution_details	Allow If	delete	record	true	admin	2026-09-22 01:07:58
u_institution_details	Allow If	delete	record	true	admin	2026-09-21 17:54:52
u_institution_details	Allow If	read	record	true	admin	2026-09-22 00:49:55
u_institution_details	Allow If	write	record	true	admin	2026-09-21 17:54:52
u_licensing_exclusion	Allow If	create	record	true	admin	2017-08-15 13:09:53
u_licensing_exclusion	Allow If	delete	record	true	admin	2017-08-15 13:10:11
VA Channel Integration ACL	Allow If	execute	REST_Endpoint	true	admin	2023-04-05 00:28:13

The screenshot shows the ServiceNow 'Institution Details' page. The breadcrumb trail is 'All > Student Roll Number'. The table lists student records with columns: Student Roll Number, Student Name, Branch, Faculty Name, Description, Email, and Phone Number. The first row is highlighted.

Student Roll Number	Student Name	Branch	Faculty Name	Description	Email	Phone Number
STU100	Abel Tuter	ECE	Abraham Lincoln	N there	Abraham@gmail.com	8099775510
(empty)	(empty)		(empty)			
STU200	Adela Cervantsz	EEE	Alleen Mottern	656	Alleen@gmail.com	1234567891
STU300	Alissa Mountjoy	CSE	Amos Linnan	NC	Amos@gmail.com	5464745510

5.Conclusion

The Access Control List Management System provides a secure and organized method for controlling access to application resources. By using roles, permissions, and ACLs, the system allows authorized users to access required resources while restricting unauthorized users. The implementation improves application security and makes user access easier to manage.
